TPD3E001
LOW-CAPACITANCE 3-CHANNEL ±15-kV ESD-PROTECTION ARRAY FOR HIGH-SPEED DATA INTERFACES

SLLS683D – JULY 2006 – REVISED APRIL 2007

FEATURES

- **ESD Protection Exceeds**
  - **±15-kV Human-Body Model (HBM)**
  - **±8-kV IEC 61000-4-2 Contact Discharge**
  - **±15-kV IEC 61000-4-2 Air-Gap Discharge**
- **Low 1.5-pF Input Capacitance**
- **Low 1-nA (Max) Leakage Current**
- **Low 1-nA Supply Current**
- **0.9-V to 5.5-V Supply-Voltage Range**
- **3-Channel Device**
- **Space-Saving DRL, DRY, and QFN Package Options**
- **Alternate 2-, 4-, and 6-Channel Options Available: TPD2E001, TPD4E001, and TPD6E001**

APPLICATIONS

- **USB 2.0**
- **Ethernet**
- **FireWire™**
- **Video**
- **Cell Phones**
- **SVGA Video Connections**
- **Glucosemeters**

DESCRIPTION/ORDERING INFORMATION

The TPD3E001 is a low-capacitance ±15-kV ESD-protection diode array designed to protect sensitive electronics attached to communication lines. Each channel consists of a pair of diodes that steer ESD current pulses to V_{CC} or GND. The TPD3E001 protects against ESD pulses up to ±15-kV Human-Body Model (HBM), ±8-kV Contact Discharge, and ±15-kV Air-Gap Discharge, as specified in IEC 61000-4-2. This device has a 1.5-pF capacitance per channel, making it ideal for use in high-speed data IO interfaces.

The TPD3E001 is a triple-ESD structure designed for USB On-the-Go (OTG) and video applications.

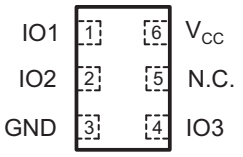
The TPD3E001 is available in DRL, DRY, and thin QFN packages and is specified for –40°C to 85°C operation.

ORDERING INFORMATION

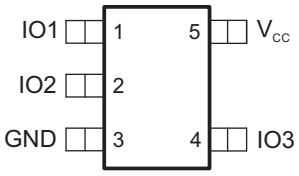
T_A	PACKAGE(1)	ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	1.6 × 1.6 SOP – DRL	TPD3E001DRLR	2BR
	1.45 × 1 SON – DRY	TPD3E001DRYR	2B
	3 × 3 QFN – DRS	TPD3E001DRSR	ZWL

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.

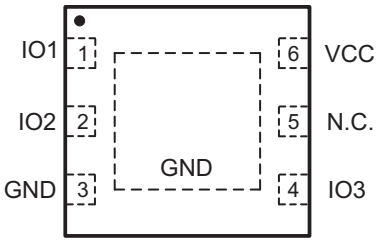
DRY PACKAGE (TOP VIEW)



DRL PACKAGE (TOP VIEW)

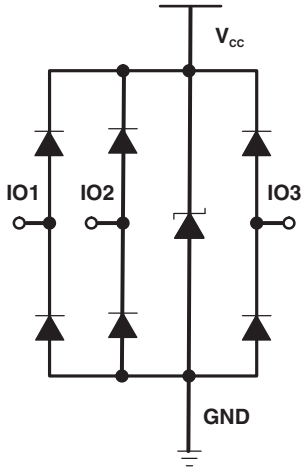


QFN PACKAGE (TOP VIEW)



N.C. - Not internally connected

LOGIC BLOCK DIAGRAM



PIN DESCRIPTION

DRL NO.	DRY NO.	DRS NO.	NAME	FUNCTION
1, 2, 4	1, 2, 4	1, 2, 4	IOx	ESD-protected channel
3	3	3	GND	Ground
5	6	6	V_{CC}	Power-supply input. Bypass V_{CC} to GND with a 0.1-µF ceramic capacitor.
	5	5	N.C.	No connection. Not internally connected.
		EP	EP	Exposed pad. Connect to GND.

Absolute Maximum Ratings(1)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CC}			–0.3	7	V
$V_{I/O}$			–0.3	V_{CC} + 0.3	V
T_{stg}	Storage temperature range		–65	150	°C
T_J	Junction temperature			150	°C
	Bump temperature (soldering)	Infrared (15 s)		220	°C
		Vapor phase (60 s)		215	
	Lead temperature (soldering, 10 s)			300	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Electrical Characteristics

V_{CC} = 5 V ± 10%, T_A = -40°c to 85°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP(1)	MAX	UNIT
V_{CC}	Supply voltage			0.9		5.5	V
I_{CC}	Supply current				1	100	nA
V_F	Diode forward voltage	I_F = 10 mA		0.65		0.95	V
VBR	Breakdown Voltage	I_{BR} = 10mA		11			V
V_C	Channel clamp voltage(2)	T_A = 25°C, ±15-kV HBM, I_F = 10 A	Positive transients			V_{CC} + 25	V
			Negative transients			–25	
		T_A = 25°C, ±8-kV Contact Discharge (IEC 61000-4-2), I_F = 24 A	Positive transients			V_{CC} + 60	
			Negative transients			–60	
		T_A = 25°C, ±15-kV Air-Gap Discharge (IEC 61000-4-2), I_F = 45 A	Positive transients			V_{CC} + 100	
			Negative transients			–100	
$I_{i/o}$	Channel leakage current	$V_{i/o}$ = GND or V_{CC}				±1	nA
C_{io}	Channel input capacitance	V_{CC} = 5 V, bias of V_{CC}/2			1.5		pF

(1) Typical values are at V_{CC} = 5 V and T_A = 25°C.
(2) Channel clamp voltage is not production tested.

ESD Protection

PARAMETER	TYP	UNIT
HBM	±15	kV
IEC 61000-4-2 Contact Discharge	±8	kV
IEC 61000-4-2 Air-Gap Discharge	±15	kV

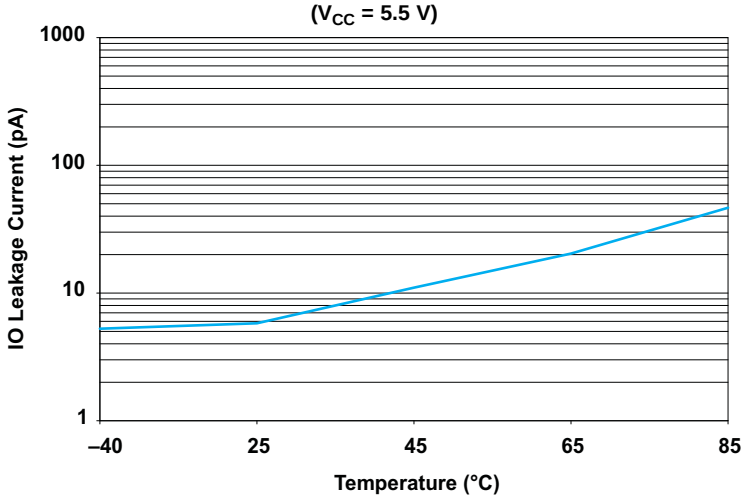
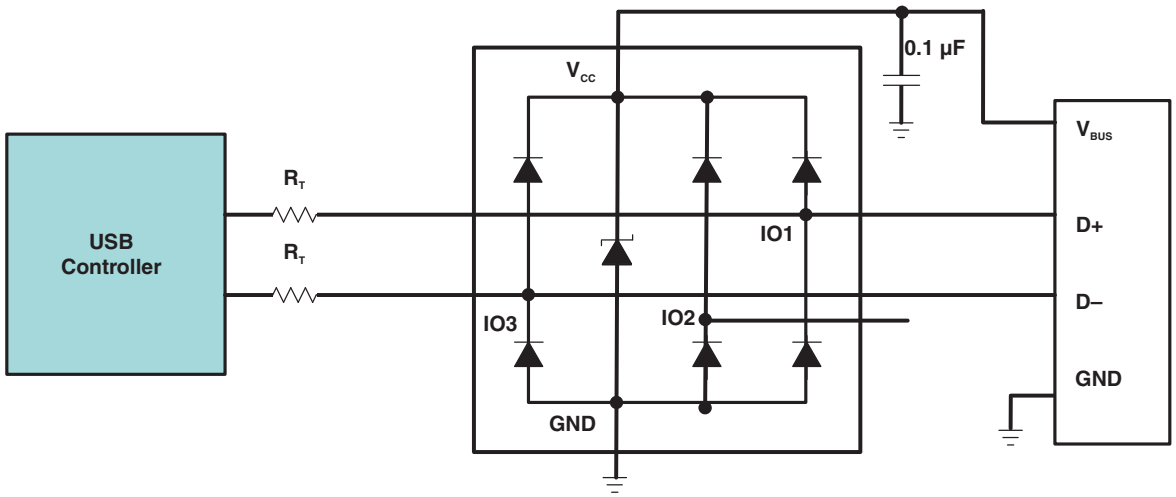
TEMPERATURE
(V_{CC} = 5.5 V)



APPLICATION INFORMATION



Detailed Description

When placed near the connector, the TPD3E001 ESD solution offers little or no signal distortion during normal operation due to low IO capacitance and ultra-low leakage current specifications. The TPD3E001 ensures that the core circuitry is protected and the system is functioning properly in the event of an ESD strike. For proper operation, the following layout/ design guidelines should be followed:

1. Place the TPD3E001 solution close to the connector. This allows the TPD3E001 to take away the energy associated with ESD strike before it reaches the internal circuitry of the system board.
2. Place a 0.1-µF capacitor very close to the V_{CC} pin. This limits any momentary voltage surge at the IO pin during the ESD strike event.
3. Ensure that there is enough metallization for the V_{CC} and GND loop. During normal operation, the TPD3E001 consumes nA leakage current. But during the ESD event, V_{CC} and GND may see 15 A to 30 A of current, depending on the ESD level. Sufficient current path enables safe discharge of all the energy associated with the ESD strike.
4. Leave the unused IO pins floating.
5. The V_{CC} pin can be connected in two different ways:

a. If the V_{CC} pin is connected to the system power supply, the TPD3E001 works as a transient suppressor for any signal swing above V_{CC} + V_F. A 0.1-µF capacitor on the device V_{CC} pin is recommended for ESD bypass.

b. If the V_{CC} pin is not connected to the system power supply, the TPD3E001 can tolerate higher signal swing in the range up to 10 V. Please note that a 0.1-µF capacitor is still recommended at the V_{CC} pin for ESD bypass.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples

TPD3E001DRYRG4	ACTIVE	SON	DRY	6	5000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	2B	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

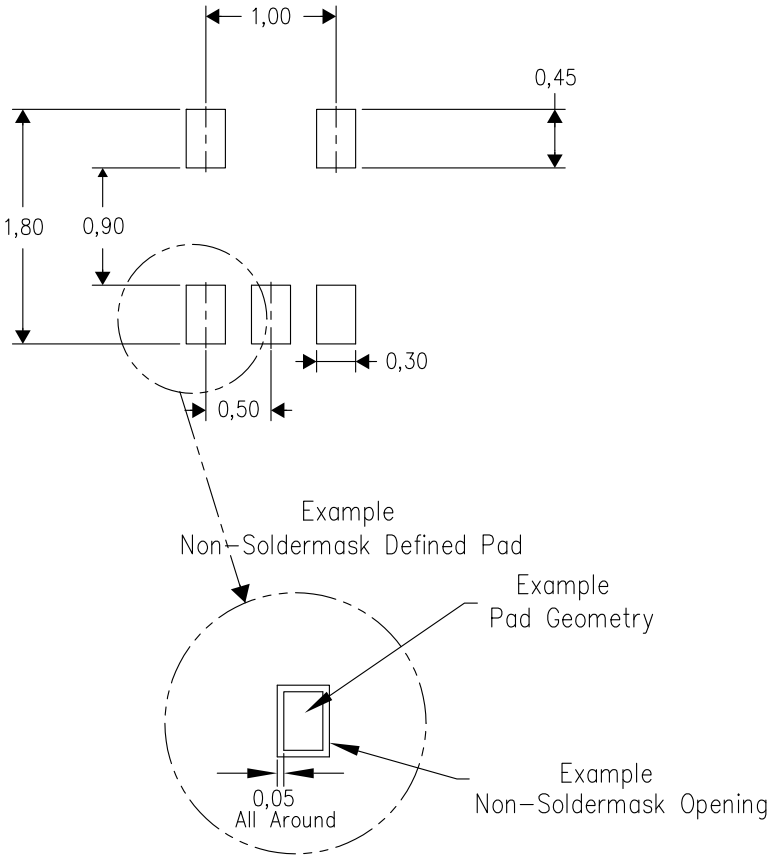
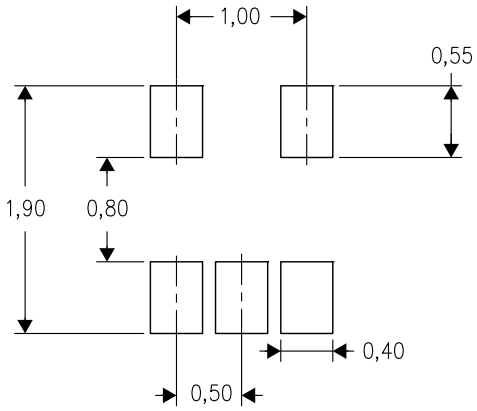
NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. Body dimensions do not include mold flash, interlead flash, protrusions, or gate burrs. Mold flash, interlead flash, protrusions, or gate burrs shall not exceed 0,15 per end or side.
D. JEDEC package registration is pending.

DRL (R–PDSO–N5) PLASTIC SMALL OUTLINE

Example Board Layout



Example Stencil Design
(Note E)



4208207–2/E 06/12

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC–7351 is recommended for alternate designs.
D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
E. Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
G. Side aperture dimensions over–print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

C. SON (Small Outline No–Lead) package configuration.
D. The package thermal pad must be soldered to the board for thermal and mechanical performance.
E. See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.

DRS (S–PWSON–N6) PLASTIC SMALL OUTLINE NO–LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No–Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
